Scale Your Sustainability Impact

Effectively tracking and measuring upstream supply chain data ensures your efforts create real, measurable impact for farmers, factory workers, and other stakeholders. But without an efficient way to manage that data and collaborate with supply chain actors, demonstrating and expanding your impact is challenging. If your current systems limit your ability to make a difference, we're here to help.

Our ChainPoint platform: a powerful sub-tier mapping application

The ChainPoint platform empowers standards and sector initiatives to scale their sustainability impact with tailored, flexible software. Drawing from deep industry expertise, we configure a solution that aligns with your specific needs. You stay in control—capturing reliable supply chain data, customizing the platform to reflect your brand, generating reports with real-time data, and sharing insights directly with stakeholders.

How we help you achieve end-to-end product traceability

Trace products from source to consumer

Gain visibility into every tier of your supply chain—know which companies, commodities, and products are involved, how they connect, and how they perform. Our platform supports all Chain of Custody models, including segregation and mass balance, and enables smooth transitions between models as your sustainability strategy evolves.

Manage audits and certification data in one place

Conduct and manage supply chain audits directly in the platform. Centralize your certification data to monitor results, assess performance, and support collaboration with auditors and certifiers. Mobile-compatible online data collection streamlines the process for on-site audits.

Visualize your data and drive smarter decisions

Leverage personalized dashboards and automated KPI reports to gain deeper insights into your sustainability efforts. Business intelligence tools reveal trends and patterns across your supply chain, empowering data-driven decisions that fuel continuous improvement.

Take the next step toward supply chain impact you can measure
