

SOURCEINTELLIGENCE 

AI in Compliance: What Source Intelligence Delivers

GUIDE

Discover how our platform blends AI and expert oversight to streamline compliance and sustainability workflows

AI + human expertise: A better way to manage compliance and sustainability data

At Source Intelligence, AI isn't a buzzword—it's a core part of how we help you move faster, reduce risk, and improve data quality. We embed AI where it delivers real value: automating repetitive, error-prone tasks so your team can focus on solving compliance and sustainability challenges.

Our approach blends powerful AI with regulatory expert oversight to supercharge data analysis, accelerate outcomes, and deliver confidence you can trust.

How our software uses AI

We apply AI to workflows that are traditionally time-consuming and error-prone, freeing your team to focus on strategy and risk mitigation. These evolving, agentic workflows represent a foundational step toward more autonomous, intelligent compliance operations—where AI can act, not just assist.

Document processing

AI reviews supplier documents, extracts key data, and maps it into your system, automatically building enriched compliance records. Every output is verified by experts for quality.

Supplier email management

AI automatically reviews and responds to supplier emails, streamlining supplier communication and accelerating response times.

Web research & data enrichment

Agents find and validate supplier compliance data from public sources, reducing redundant outreach and improving data completeness.

Note: These features are currently available to managed services clients. We're actively expanding them into our self-managed enterprise SaaS platform.

Why leading teams trust our AI-driven software

Our intelligent software gives compliance teams the tools to move faster, reduce manual workloads, and make decisions with greater confidence.

- **Less manual work:** AI handles repetitive tasks so your team can focus on strategy and high-impact projects.
- **Faster results:** Documents and supplier responses are processed in minutes, not days.
- **Stronger data:** AI improves completeness and consistency across compliance records.
- **Fewer errors:** Built-in expert oversight ensures accuracy and audit readiness.

We don't use AI to replace experts—we use it to supercharge them. Every AI-generated output is reviewed by our in-house regulatory team to ensure quality, completeness, and regulatory alignment. You get the efficiency of automation with the confidence of expert human oversight.

The Source Intelligence difference

Source Intelligence applies AI differently than other providers—intentionally, securely, and where it drives the most value.

AI is deeply integrated

We build AI into workflows where it enhances outcomes—not as a bolt-on.

Built for compliance, not just speed

Our platform is rooted in regulatory logic, with a focus on quality, traceability, and risk visibility.

Backed by real people

Our team of experts oversees every step, enhancing both AI output and client support.

This is the result of expert software built by engineers for engineers—AI that's designed to solve real-world compliance problems with accuracy, transparency, and speed. As we continue evolving toward more agentic workflows, our platform is built to stay ahead of what compliance teams need.

FAQs about our AI capabilities

**Q: How does Source Intelligence use AI in its platform?**

We use AI to automate high-volume tasks like document parsing, supplier outreach and support, and compliance data validation. This helps our clients move faster with more confident results.

**Q: Is AI only available with managed services?**

Currently, yes. AI is already embedded in our managed services workflows, and we're actively expanding those capabilities into our self-managed enterprise SaaS platform.

**Q: How accurate is your AI?**

Very. Every AI output is reviewed by a regulatory expert before use. This "human-in-the-loop" model ensures speed, precision, and audit-readiness, while avoiding errors and mitigating risk.

**Q: Will using AI lower the cost of your platform?**

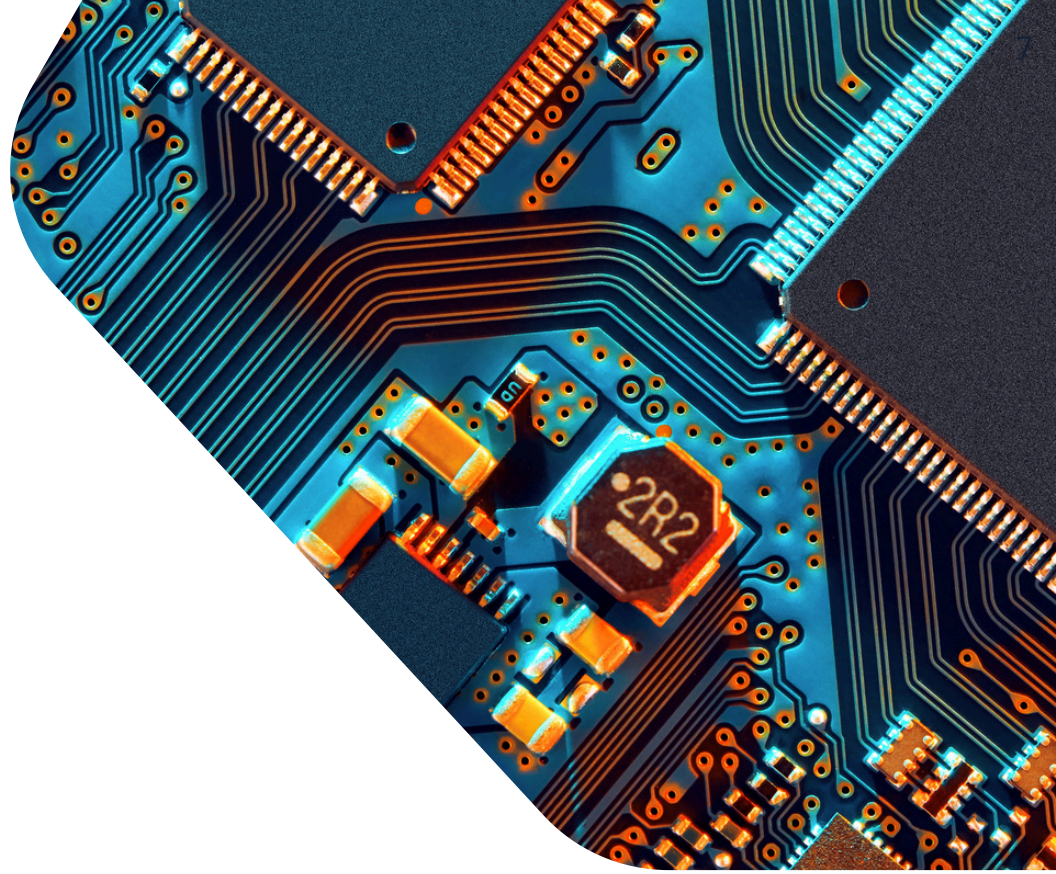

AI improves speed and efficiency, but the real value is higher-quality data and better compliance outcomes—not just lower cost.

**Q: How do you keep our data secure when using AI?**

We use trusted providers like OpenAI under strict security protocols. Your data is never exposed to public models or unsecured environments.

**Q: How does AI help my team directly?**

AI minimizes repetitive work, uncovers risks earlier, and frees up time for strategic initiatives—giving your team more space to focus on what matters most.
